Lec-14

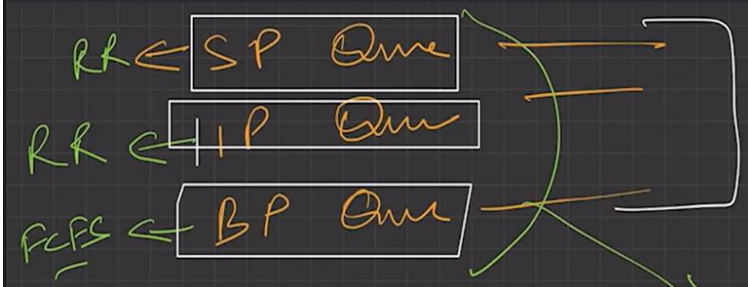

① Multi-Level Queue scheduling (MLQ)

① System process :- Created by OS

② Interactive process :- User input required.
(fore ground) :-

③ Batch process :- X i/P (No i/P)
(Back ground)

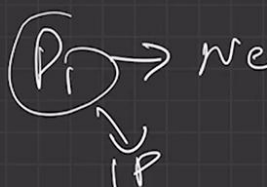

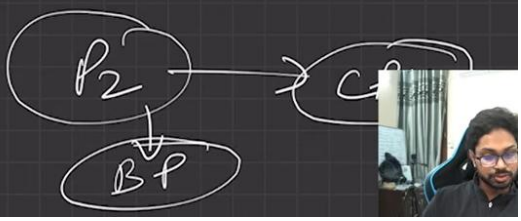

own scheduling

?? schedule ?

SP > IP > BP

- Multiple sub Queues
- Inter queue movement is allowed.
- separate process based on BT.
  - BT ↑ → Lower queues
  - I/o bound & interative process higher priority.
  - Ageing method Lower ^priority process Priority ↑
  - flexible
  - Configurable OS design

Design of MLFQ :

1. No. of Queue.
2. Scheduling Algo in each Qu.
3. Method to upgrade a process to a higher Queue.
4. demote a process to Lower priority
5. Process P_i → which Queue will be Pushed
